Art Unit: 1714

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 30 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited average molecular weight is indefinite in not specifying a particular average molecular weight such as a number or weight average molecular weight.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-13, 18, 25 and 27-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vanderhoff et al (US 5,830,927) in view of Bellas (US 5,897,698).

Rejection is maintained for reason of record and following response.

Contrary to applicant's assertion, the examiner's rejection is based on the use of the art well known pigment of Bellas in Vanderhoff et al, not a copolymer of Vanderhoff et al in Bellas. Also, Vanderhoff et al clearly teach the instant styrene/polyacrylate copolymer having an acid number of 190 and 200 and MW of 10,000 and 8,000 at col. 12, lines 39-51 (Joncryl 67 and Joncryl 678/679 used in table B).

Art Unit: 1714

Claims 10-18, 25 and 27-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vanderhoff et al (US 5,830,927) in view of Bellas (US 5,897,698)., and further in view of Mead et al (US 5,596,027).

Rejection is maintained for reason of record and above, and following response. Vanderhoff et al teach the use of water-soluble resins such as styrene/polyacrylate copolymer. Joncryl 678/679 is said to have some alpha-methyl styrene (col. 12, lines 46-47). Mead et al teach various water-soluble and water-dispersible resins and equate alpha-methyl styrene-modified polyacrylate and styrene-modified polyacrylate. Thus, the further use of said alpha-methyl styrene-modified polyacrylate of Mead et al in Vanderhoff et al is a *prima facie* obviousness.

Claims 19-24 and 26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
